PROGRAM 2015

BROCHER FOUNDATION
PROGRAM 2015

Adress of Ulf Schmidt, Professor; University of Kent
One of the Brocher Alumni

Over the last couple of years, the Swiss-led, non profit Brocher Foundation has become known as an essential player in supporting world leading scholarship at ever level in the field of bioethics and law, public health, medical history, anthropology, philosophy and the medical humanities. The scope of its funding portfolio and support is wide-ranging, highly international, truly interdisciplinary and, above all, driven by a genuine desire to provide 'space' – in both the literal and the metaphorical sense – for early career and senior scholars to develop bold and innovative new ideas, facilitate the organisation of international symposia and workshops, or see existing projects through to their successful completion and publication.

In my case, I was very fortunate to benefit from, and experience all three of the above funding initiatives, from a three months joint-fellowship with my colleague Professor Andreas Frewer from Erlangen-Nuremberg University in 2012, which led to a series of collaborative and interdisciplinary initiatives, including a workshop, peer-reviewed publications and an exhibition on 'Global Health Ethics' at the World Health Organisation (WHO), followed by a Brocher/Wellcome Trust-funded international two-day conference about the history and role of international medical ethics standards in 2013, the proceedings of which will be published by Oxford University Press (OUP) as a major jointly-edited volume, and finally, in 2014, the completion and editing of my long-awaited monograph which looks at the history of chemical and biological warfare research in the 20th century, scheduled to be published by OUP in 2015. Together, the fellowships have facilitated one of the most productive and also creative periods in my academic career so far. So how is it being done?

The actual setting in which all of these activities take place is nothing short of spectacular: Situated in Hermance on the south-easterly side of Lake Léman, near Geneva, fellows live in a renovated 19th century villa (formerly owned by Mr and Mrs Jacques and Lucette Brocher, who set up the foundation), and are being given their own offices in an architect-designed building on the same grounds. The location allows researchers to link up with, and benefit from, the extensive network and knowledge of local experts from the international governmental and non-governmental organisations having their headquarters in Geneva. The idea of living and working together as a group of like-minded academics and scholars-to-be is what makes the Brocher concept both unique and so successful at the same time. In a climate of economic austerity and prolonged budget-cuts in higher education institutions, in which most of my colleagues around the world are struggling to find sufficient time for 'original thinking' next to their ever increasing administrative and teaching duties, scholars are more than ever looking for 'save heavens' which give them a much-needed 'breathing space' for the free and informal exchange of ideas and information.

In addition of experiencing a kind of scholarly "Retreat", it has also been a wonderful opportunity to enlarge ones international academic and professional network. Those who run and oversee Brocher are giving scholars something which they might have enjoyed in some distant past, something most of us no longer have, and in some cases may never have had: a sense of freedom. It is the freedom for original thinking, the freedom to experiment, to try new lines of inquiry, to doubt and to probe which is at the heart of the Brocher mission. For only when scholars are given these fundamental, but no longer readily-recognised, freedoms in such a highly supportive and collegiate atmosphere can they have the confidence to push the boundaries of our knowledge and enhance our understanding of humans and society.
